SAFE MICROSCOPIC TECHNIQUES FOR AMATEURS Slide Mounting

Synopsis

With many chemicals once used to prepare and mount specimens on slides now banned or deemed toxic, the enthusiast microscopist requires access to easy-to-source mixes and chemicals to mount their own slides. This work by Walter Dioni provides a perfect solution.

Book Information

File Size: 14327 KB

Print Length: 102 pages

Publication Date: June 1, 2014

Customer Reviews

I have written other reviews about beginning microscopy books. This is a step up for a beginner, and teaches some excellent techniques using much safer chemicals than you would use in a professional or university lab. A small book with a wide enough coverage of techniques to keep you busy for some time. Highly recommended by a 50 year practicing amateur microscopist.

This book is a compilation of articles by Walter Dioni who was looking for low cost, low toxicity techniques for mounting specimens for the microscope. This book was written for the amateur scientist who wishes to make permanent slide mounts of his specimen. Mr. Dioni provided a variety of recipes for this end. This book is not written for the professional scientist, however. Many of the chemicals recommended in this book, while readily available, may not be suitable for the

researcher. For these workers, the quality, purity, and reproducibility of the reagent is critical. But such reagents are unavailable to the hobbyist and Dioni's book provides an invaluable resource for those who approach microscopy as an avocation.

Great book for beginners

For a dabbler in microscope hobbying, the book is too technical. I was hoping for simple solutions but was perplexed by a multitude of necessary ingredients that I do not know where to find. I did not have the time to utilize the recipes in the book.

great!
