# Tropical Root And Tuber Crops: Cassava, Sweet Potato, Yams And Aroids (Crop Production Science In Horticulture)

## Synopsis

Most of the world's poorest smallholders depend on tropical roots and tubers crops as their principal source of food and nutrition. These species produce large quantities of dietary energy and have stable yields under difficult environmental conditions. The most important crops are cassava, sweet potato, yam and the aroids, sharing important common traits such as bulkiness, post-harvest perishability and vegetative propagation. This book compiles the most up-to-date information on the origin, genetics, physiology, agronomy, pests and diseases and postharvest processing of these crops, while attempting to provide ideas for further research and development.

## Book Information

Series: Crop Production Science in Horticulture (Book 17)

Paperback: 440 pages

Publisher: CABI; First edition (December 12, 2008)

Language: English

ISBN-10: 1845934245

ISBN-13: 978-1845934248

Product Dimensions: 9.1 x 0.8 x 6.1 inches

Shipping Weight: 1.8 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars [See all reviews](#) (2 customer reviews)

## Customer Reviews

Very good book.

Well written and informative. Covers many different varieties. Meant more for academia than the average gardener.
