Mysteries And Secrets Of Time

Synopsis

This fascinating work begins with a scientific appraisal of time and its relationship with 3D space. It explains in clear, understandable language, the complex theories of such famous men as Newton, Einstein, and Stephen Hawking. Is time infinite, or does it have a beginning and an end? Do Black Holes and White Vortices distort time, or penetrate it? The authors also analyse and evaluate puzzling, well documented reports of time travel and reincarnation, and strange cases of *deja vu*. Can time travel account for such anachronistic discoveries as a 20th century sparkplug found encased among fossils half a million years old? Finally, the authors bring all the unsolved time-related mysteries together in a unified field theory that suggests an awesome answer to the mysteries of time-travel and reincarnation.

This wasn't what I first thought it was going to be about. I am fascinated by the Space/Time Continuum and thought this was going to be like the other books on the subject. Turns out this book is more into the metaphysical aspects of time. I believe in an afterlife, but I believe that one either goes to Heaven or to Hell. I have a problem with people who say they contact with the dead and such. The authors talk about such things as two teachers who may have stumbled on a time vortex that took them back to the time of the French Revolution and may have interacted with such people as Marie Antoinette, etc. They also talk about a man who supposedly created a mini-black hole, but

died before any demonstration and such. It is a book that one should read with their tongue firmly in their cheek and a large amount of salt. Even so, it can be an interesting book for an evening's read.

Very interesting and revealing

Slightly below average.
