Cross Currents: The Perils Of Electropollution, The Promise Of Electromedicine

Synopsis

Discusses the impact of electromagnetic pollution on the human body, and describes alternate healing methods that make use of the body's innate electrical healing systems.

Book Information

Paperback: 352 pages

Publisher: TarcherPerigee (December 1, 1990)

Language: English

ISBN-10: 0874776090

ISBN-13: 978-0874776096

Product Dimensions: 6.1 x 0.9 x 9.1 inches

Shipping Weight: 14.4 ounces (View shipping rates and policies)

Average Customer Review: 4.8 out of 5 stars [See all reviews](#) (50 customer reviews)

Best Sellers Rank: #80,127 in Books (See Top 100 in Books) #28 in [Books > Science & Math > Physics > Electromagnetism > Electricity](#) #198 in [Books > Medical Books > Basic Sciences > Physiology](#) #263 in [Books > Engineering & Transportation > Engineering > Electrical & Electronics](#)

Customer Reviews

Dr Robert O Becker was an orthopaedic surgeon who researched cell/limb regeneration and ended up as an expert on the effects of electricity on the body. His work puts a sound scientific basis to the area of electric fields. He was involved in reviewing electronic fields for the military which gave him a unique access to data. This allows him to bring together an interesting range of facts. Hospitals now use a number of devices that are based on his work. One device was patented by Dr Andy Bassett (a student of his) and involved using a magnetic field to speed bone union in fractures. Another device involves inserting 2 electrodes into a bone or wound which is infected (and thus not healing) and using a mild electric current to kill the bacteria. My friend says they did this to him in hospital recently... so it's obviously catching on. A third device is being used in hospitals for cancer: using 2 carbon nanotubes (probes) we can liquify cancer tumours using the electroporesis effect (as documented by Dr Robert Beck a physicist). Beck based his work on Kaali and Lyman... and they based their work on preceding work... which I assume included Becker. A surprising book. Covering topics you don't expect to find mentioned. A book with credibility. A book full of useful facts. A book that advances our knowledge of electronic hazards significantly. Dr Robert O Becker died in 2008... but not before finally patenting a device for regenerating tissue in 1998 ie. the de-differentiation of

specialised cells and their re-differentiation into the required tissue. So who needs stem cells? I'm at a loss why this work hasn't been more widely used or cited... and it's not very complicated either... although I suspect that Becker might have left out a bit of detail.
