# Earth's Climate: Past And Future

## Synopsis

At a time when the evidence is stronger than ever that human activity is the primary cause for global climate change, William Ruddiman's breakthrough text returns in a thoroughly updated new edition. It offers a clear, engaging, objective portrait of the current state of climate science, including compelling recent findings on anthropogenic global warming and important advances in understanding past climates.

## Book Information

Paperback: 464 pages

Publisher: W. H. Freeman; 3 edition (October 1, 2013)

Language: English

ISBN-10: 1429255250

ISBN-13: 978-1429255257

Product Dimensions: 8.4 x 0.6 x 10.8 inches

Shipping Weight: 1.8 pounds (View shipping rates and policies)

Average Customer Review: 3.7 out of 5 stars See all reviews (3 customer reviews)

Best Sellers Rank: #59,876 in Books (See Top 100 in Books) #59 in Books > Science & Math > Earth Sciences > Weather #62 in Books > Science & Math > Earth Sciences > Geology #104 in Books > Textbooks > Science & Mathematics > Earth Sciences

## Customer Reviews

This book contains errors that can't be anything but deliberate fraud. For example, on page 321 he states: "Satellites that have been measuring the altitude of the ocean surface since 1992 indicate a mean sea level rise of 3 mm per year, or almost twice the 1.7 mm/yr average for the 1900's." This is bullsh\*t. The 1.7 mm/yr figure was derived from tide gauges, which still show exactly the same 1.7 mm/yr rise today as they have shown for over 100 years. There has been no change in sea level rise using that metric. The change from 1.7 to 3.0 was because of a change in measuring system, from tide gauges to satellites. To say this shows an acceleration in sea level rise, without saying that the old measuring system finds no such acceleration, is fraud, and its inclusion in a textbook is unconscionable. This can't be a simple error, it's a lie. For another example, on page 309 he states: "The rate and amount of warming since 1900 has been unprecedented compared to changes during the previous 1000 years" No kidding. Because 1000 years ago was the peak of the Medieval Warm Period, which was as warm as today. The warming since 1900 brought us up to the same temperature as 1000 years ago, a date which he picked because it excludes the warming leading

up to it. Duh. Why didn't he say 2000 years? Because there were TWO warming periods since Roman times that were as great or greater than today. His use of the word "unprecedented" is meaningless anyway because he gives a starting date. Unprecedented means it never happened before. "Unprecedented" is a cliché word now anyway, one commonly used by warmist attention-seekers as part of their shibboleth.
