ISBN-10: 0961584823

ISBN-13: 978-0961584825

Product Dimensions: 11 x 8.3 x 0.4 inches

Shipping Weight: 14.4 ounces

Average Customer Review: 4.2 out of 5 stars [See all reviews](#) (38 customer reviews)

Best Sellers Rank: #670,359 in Books (See Top 100 in Books) #18 in [Books > Science & Math > Agricultural Sciences > Irrigation](#) #3368 in [Books > Science & Math > Nature & Ecology > Conservation](#) #4562 in [Books > Crafts, Hobbies & Home > Gardening & Landscape Design](#)

Customer Reviews

I wanted to convert portions of the yard to drip irrigation. After getting a quote from a contractor that seemed really expensive, I figured I would try to do it myself. Based on the positive reviews for the earlier version of this book (see *Drip Irrigation for Every Landscape and All Climates: Helping Your Garden Flourish, While Conserving Water!*), I thought this would be the book to get. This book was a very helpful introduction to the subject, and the author certainly seems to know his stuff. You can take the principles that this book teaches you and use them to figure out how to set up your own system. A few items of note.

1. Even with the help of this resource, I found it necessary to do additional research about plant water needs, evapotranspiration rates (e.g., the rates at which different plants "lose" water under different conditions), and available products in order to set up the system. This is not meant as a criticism of the book. The book gives general principles and examples but you will need additional information to set up your own system. There's lots of good information on the internet. The book gives you a framework to understand the information you will get from other sources.
2. With a few exceptions, and based on his many years of experience installing these systems, the author has a bias towards using 1/2" drip line for most drip irrigation applications.
